Chapter 1

*Imagine a Vertical Take-Off and Landing fighter but
which is as quiet as a family car*

Able to sustain a hover for about an hour forty minutes. With a manoeuvrability that would be considered impossible by the standards of any aerospace company in existence. A fighter with capabilities such as the one shown here except a lot quieter, able to hold a hover for far longer, far faster and far more manoeuvrable.

[Harrier Vertical Take-Off](#)

The only way I could build this would be if I were to use Impulse Drive, which is blocked to humanity because of the failure of Golden Age

It along with many other key technologies are denied humanity because governments couldn't give a flying fuck about Golden Age. Lesser men. Shadows of men.

And so I cannot release this technology to others. But I would still develop it in secret. We would have it in Ireland. No-one else. We need to ramp up very quickly or we have no hope whatsoever against the Borg. These aircraft are to be the forerunners of the Vipers. Either we build them *or we get wiped out*. So regardless of the blindness of governments who couldn't give a flying shit about the most significant event in history and the survival of humanity, we still need to develop them. It's simply that the technology will be developed in secret and denied to the rest of humanity.

Get me in as Taoiseach and I will develop these fighters in Ireland.

Chapter 2

Every one of the pilots will have Rank of Dragon

Every single one of the pilots will be Irish speaking. Only if Irish is the language of the Air Force could I build these fighter aircraft.

Avicii Vs Lurgan – “Wake Me Up” as Gaeilge
