# The Arc Reactor

## Chapter 1

*I had some key breakthroughs in power generation systems in 2013, but it was in 2014 that it all came together. That is when I solved the Arc Reactor.*

Which makes me kind of the only name in clean energy right now, that's what I'm getting at. I could generate clean, renewable electricity (non-polluting ) for about 3 % of the cost of conventional means. With *no pollution*. I developed the system in 2014, but I didn't put a name on it until late 2017. It was in thinking about how the electricity generator actually works that I suddenly laughed, for I realised that the name "Arc Reactor" was actually very appropriate . That is when I started calling it an Arc Reactor. Three years after I had invented it.

This was to have been one of the key projects to drive Golden Age, solving our energy crisis problems and going a huge way to solving some key environmental problems to do with pollution, waste management and the draining of the Water Tables.

*This project was to have been a key driver in Golden Age*

I contacted a number of governments saying that I had solved the problem of clean, abundant electricity. I contacted them in good faith.

It didn't work out.

[Chain Reaction Trailer \(1996\)](#)

If you understand this then you understand a key reason why I am always broke.

# X-Girl

## Chapter 1

*I need a change in lifestyle. I just do.*

## Chapter 2

*I never did get to build the Arc Reactor*

But I know how to do it. The sooner I get to build it the sooner we start tackling some key environmental problems. However given the current political climate I do not expect that to happen for quite a number of years. But once the problems with governments are sorted, then I most certainly plan to build it.
